## Eco-\$mart Carpentry Wood Plyboo Bamboo Plywood

Plyboo Bamboo Plywood is made from 100 percent rapidly renewable bamboo, using adhesives that are both strong and emissions free. Plyboo Bamboo Plywood can be cut and sanded using conventional woodworking equipment. It can also be glued or mechanically fastened using the same materials and fasteners commonly used with wood. Bamboo is a low resin, open grained material that takes stains and finishes exceptionally well.

Plyboo Bamboo Plywood comes in both an amber and natural light tone and is laminated to produce two different surface grains, edge and flat. The edge grain appears as 1/4" strips and the flat grain appears as 3/4" strips on the surface of the Plyboo Bamboo Plywood. It is then finish-sanded to a smooth 180 grit. Whether you are planning a small remodel or a national retail expansion, we have the bamboo material to do the job.
