

Ozone Pure Water, Inc. has a wide range of water treatment systems to eliminate these "monsters" from your water!

Introducing the Latest Breakthrough in Water Purification Technology!

Great Tasting Drinking Water at Your Kitchen Sink!

The USO-3 Under-The-Sink Water Treatment System:

Now you can have safer, good-tasting, chemical-free, lead-free water at the convenience of your kitchen sink. Thanks to the incredible USO-3 undersink ozone water purifier that gives you bottled water quality at the touch of your faucet. Use odor-free, clean, clear water for drinking, cooking and sparkling trays of ice cubes.

How?... Ozone is a natural way of treating water. It inactivates many compounds and organics that are found in water as contaminants. Lightning is the prime source of ozone in nature. Unfortunately, it is not convenient to keep lightning around the house, so we have developed the USO-3 to perform the same function, but in a small, safe unit that fits under your kitchen sink, or in the basement.

The USO-3 allows you to ozonate your own tap water to equal or better quality than the expensive bottled water that you buy at the store or have delivered to your home. (Most bottled water in stores states "ozonated" on the label.) No more running to a machine. No need for home delivery. No more wasting valuable space for storage of bulky water bottles. No more heavy lifting.

How It Works:

Pre-treated water from your neighborhood water system * enters the

The USO-3 Safely Reduces:

USO-3 and is exposed to ozone generated in the unit. Then into a special filter and on to your kitchen sink faucet. It's all automatic and is maintenance free (the unit requires only a periodic filter change).

General Applications:

- Pre-treated municipal/city water
- Treated underground water (deepwell)
- Spring or mineral water (bottled)

- Chlorine odor and taste
- Chloroform and trihalomethanes (the known cancer causing agent in chlorinated water)
- Lead, mercury, cadmium, heavy metals. (Ordinary charcoal filters do not remove lead.) Protect children and the unborn.
- Cryptosporidium and giardia cysts. (Remember the Milwaukee Crisis?)

* Not to be used on untreated well water that contains iron, iron bacteria, sulphur, etc.

The USO-3 Is Economical

The low initial cost and long life of the USO-3 combined with an operating cost of just pennies a month makes USO-3 ozonated water one of your most inexpensive necessities. If you now use bottle water, the USO-3 can pay for itself in 18 months or less. You use all of the water that passes through the system. There is no wasted water as in some other systems, such as reverse osmosis units. For every four gallons of water that passes through the reverse osmosis unit the yield is only one gallon of treated water. In areas of high water and sewer rates, this is a distinct advantage of the USO-3 -- and is ecologically attractive. So why take chances with the water you drink?

It's simple to have water that meets or exceeds the U.S. Clean Water Act standards and water that meets or exceeds all bottled water standards.

Do It Yourself

The USO-3 is compact and easy to install.

Requires no special tools or complicated plumbing hookup.

You can do it yourself or use a handyman or plumber, if you prefer.

The unit is freestanding and portable.

Because it requires no permanent attachment to the house, it can be removed in minutes and taken with you when you move.

Satisfaction Is Guaranteed

The USO-3 comes with a 1-year warranty covering parts and labor.

Also Available: Treatment units for deepwell water, spring/mineral water for bottling, [commercial/industrial units](#), etc.
