The background of the slide is a photograph of a roof covered in Eco-Shake roofing. The left side shows a close-up of the shingles, which have a mix of brown, tan, and grey tones. The right side shows a wider view of the roof, including a ridge and a section where the roof meets a light-colored wall. A green curved banner at the top contains the logo, and another green curved banner at the bottom contains the text.

Eco-Shake roofing has been designed and tested to endure the most extreme weather conditions, including hurricane strength wind and rain. Eco-Shake is UV and Infrared protected. Eco-Shake has solid color throughout – it will not chip, peel or scratch. Eco-Shake requires virtually no maintenance.

A close-up photograph of a roof covered in dark grey, textured Eco-Shake tiles. The tiles have a wavy, organic shape that mimics natural wood shakes. In the background, some autumn-colored trees are visible.

An Eco-Shake roof has the rich appearance and timeless beauty of an authentic wood shake roof, while also providing the maximum strength and durability of any available roofing product. Eco-Shake meets and exceeds the toughest testing criteria for fire, sun, wind and rain.

A photograph of a two-story house with a light-colored stucco exterior and a dark grey Eco-Shake roof. The house features wooden balconies with railings. It is situated next to a body of water, with trees and a clear sky in the background.

Eco-Shake is manufactured from 100% recycled, sustainable materials making it the ideal choice for the environment.

Eco-Shake has been in production for over 25 years with many installations in the U.S., Canada and Mexico.
